

Add a little colour to your business meetings minutes – and any other audiovisual content – by using professional and user-friendly Speech-to-Text Technology

Our automated transcription tool (*CPSL Transcript*) uses artificial intelligence for speech-to-text conversion. The resulting automated transcription, which is usually ready in minutes, is sent to a professional transcriptionist for review, depending on the quality standard required by the client (unedited or edited automatic transcription).

When

- Meetings
- Conferences
- Telephone calls
- Recordings
- Interviews
- Combined with translation, subtitling and voice-over

Possibilities

- **Verbatim:** depending on several factors such as the quality of the recording, the accents of speakers and the rate of speech, the automated transcript will only need a few edits by a professional transcriptionist to produce a verbatim transcription and, when needed, they will add the required touch according to your style guides
- **Paraphrased:** a professional transcriptionist will summarize the 'raw' automated transcription for you

Format

- **Input:** Most common audio/video file formats
- **Output:** .docx., .txt, .srt, .vtt... We adapt to your needs

Quality

- Only professional transcriptionists
- Final transcript adapted to your style guides

Speed

- Cut your turnaround times by using:
- Cutting-edge speech-to-text technologies + editing by a professional transcriptionist
 - Proprietary software to streamline the process

Let our experienced team help you optimize operational strategies, reduce costs, and streamline your company's transcription projects by creating fast-track channels for processing and converting hours of audio and video content to text in minutes, not days! Our mission: provide super-fast and accurate speech-to-text conversion, powered by computers and perfected by people.
